SUMMARY

Frontend developer (React, Next.js, Tailwind CSS) running several freelance and contract projects at once: end-to-end build, brand/design, deploy, and the ops that keep them running.

SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, HTML/CSS
- **Backend & data:** Node.js/Express, PostgreSQL (PostGIS)
- **Payments & integrations:** Paystack, Squad, Figma-to-code (Figma MCP), REST APIs
- **Design & ops:** Figma, Canva, brand/design systems, social content, WordPress, Google Sheets
- **Practices:** Git/GitHub, API testing, deployment (Netlify, Vercel), Agile collaboration with distributed teams

EXPERIENCE

LuxRide, remote - *Frontend Developer (Web & Mobile)*

January 2026 - PRESENT

- Built the frontend for both the website, admin portal, and React Native mobile app
- Worked against the project's chosen stack (Node.js/Express, PostgreSQL/PostGIS, Redis, Socket.io, Paystack) to integrate real-time and location features into the UI
- Owned brand and visual design direction myself (typography: Montserrat + Montserrat Alternates). No dedicated UI/UX or brand designer on the project; the brief was simply to build the app

Qvate Solutions (DojoConnect), remote - *Frontend Web Developer*

June 2025 - August 2026

- Built sign-up and enrollment flows: admin sign-up, parents signing up and enrolling children into classes and paying, and instructors accepting invites
- Built admin tools for managing appointments and broadcasts on the website
- Built the back office, giving super admins visibility into everything happening across both the mobile app and the website
- Mapped Figma screens (Auth, Dashboard, Users, Classes, Revenue, Feedback, Settings, Sign-up Requests) directly to existing code using Figma's MCP integration
- Integrated changes, ran API tests, and shipped via GitHub.

Kersa Technologies(Kube), remote - *Product Lead & Frontend Developer*

May 2026

- Built the frontend for both the website and the React Native mobile app
- Core UX model, plus real architecture/fee-model decisions (Supabase, Paystack Split Payments, PostHog, Metabase)
- Brand + Figma prototype design
- Designed the revenue model around a per-transaction service fee collected via Paystack.

Kersa Technologies(Watt), remote - *Product Lead & Frontend Developer*

May 2026

- Set the MVP architecture: positioned Watt as a unit-purchasing app via the BuyPower vending API, working around the lack of any real-time balance API from Nigerian electricity distributors, with consumption tracking layered on top.
- Built the frontend for both the website and the React Native mobile app.
- Owned brand identity and logo design for Watt end-to-end and built iterative React prototype screens
- MVP architecture call (BuyPower vending API workaround for the DisCo data gap)
- Brand/logo + Figma prototype design

Wadtails & Wadgames, remote - *Operations Manager*

May 2025

- Designed and built the Wadtails website from scratch with a split-panel landing page, category-filtered menu, cart system, a Wadgames website, and a dedicated Bar Service section
- Integrated a payment gateway (Squad) with an inline checkout widget, plus a bank-transfer fallback
- Created the brand's editorial design language from scratch (Cormorant Garamond + Montserrat, cream/navy palette) and the three-brand landing page structure; no dedicated designer involved; the brief was simply to build a website
- Oversee day-to-day operations and social media content across both brands, including event flyers and sponsor materials for related community events
- Built a weekly inventory/reconciliation tracking template in Google Sheets for ongoing team use

EDUCATION

Rivers State University, Port Harcourt - *B.Eng*

October 2018 - October 2023
